

## How many standard drinks are there in what I'm drinking?

Before you drink, check the label for the standard drinks content. It will tell you how many standard drinks there are in that bottle, can or cask.

In pubs or bars, the serving sizes are usually consistent – at home, you are probably pouring different amounts depending on the size of your glass. But, by checking the standard drinks label, you'll have a good idea of how many drinks you should be serving out of each bottle.

For example, if the standard drinks label on a bottle of wine says it contains eight standard drinks, and that bottle is empty after pouring only four glasses, each of those glasses contains approximately two standard drinks or 20 grams of pure alcohol. If you pour six glasses from the same bottle each glass contains approximately 1.3 standard drinks or 13 grams of pure alcohol. Simple!

Because wines have different amounts of alcohol in them, not all bottles of wine will contain eight standard drinks. Some will be less, some more. Check the label.

### Where do I look?

You'll find the standard drinks content on the label of each bottle, can or cask. If the label shows that your bottle of beer contains 1.5 standard drinks then you are drinking 15 grams of pure alcohol. If a bottle of spirits contains 32 standard drinks and you pour it into 16 glasses, each glass will contain two standard drinks, even if you add a mixer to it.

330ml of lite beer at 2.5% alcohol

750ml bottle of wine at 13% alcohol

1000ml bottle of spirits at 47% alcohol

## Standard drinks – know how much alcohol you're really drinking

The standard drinks measure is a simple way to work out how much alcohol you are drinking. All bottles of wine, beer and spirits, and all cans or casks now have standard drinks content on the label – so you can easily tell how many standard drinks there are in what you're drinking.

### What are standard drinks?

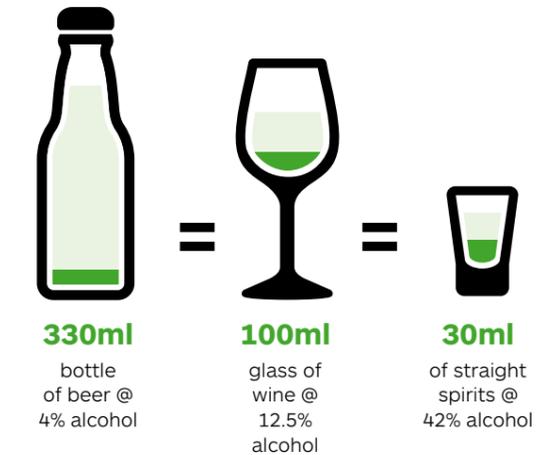

Standard drinks measures the amount of pure alcohol you are drinking.

**ONE STANDARD DRINK EQUALS 10 GRAMS OF PURE ALCOHOL**

**It's not the amount of liquid you're drinking that's important – it's the amount of alcohol.**

APPROX. 10G PURE ALCOHOL

Each of these is one standard drink containing approximately 10 grams of alcohol, depending on the alcohol percentage.

A standard drink is a measure of the amount of alcohol, not the amount of liquid you're drinking – because it's the alcohol content that's most important to track.

Because drinks have different amounts of alcohol in them, the number of standard drinks in each bottle, can or cask will be different.
